Atwood
Atwood Mobile Products LLC

The primary difference between Atwood and Others are the mounting holes
From the top of the trailer tongue to the center of the mounting holes
Atwood mounting holes are located 1" down
Common mounting holes are located 3/4" down
Do not drill the original holes larger to try and match the offset!

UFP
By DEXTER

The UFP style is a longer unit and comes with a 3-bolt mount
According to UFP: You should drill additional third set of holes in trailer tongue
when replacing original two-hole mount Actuators

Atwood utilizes a lock-out lever to create free backing
UFP utilizes a lock-out cap, sold separately

For A Complete Actuator
